CREATE DRIPPING LIQUID: STEPS IN PHOTOSHOP

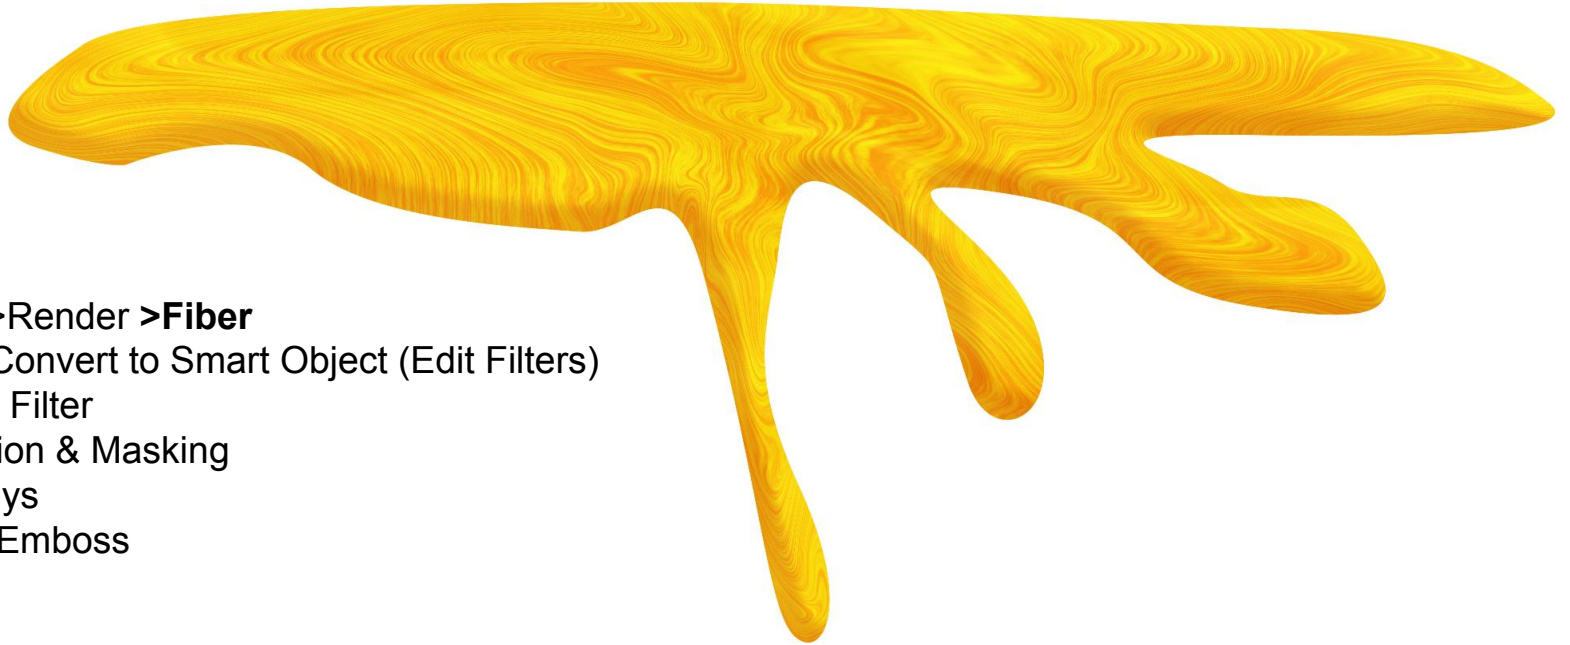

VIDEO TUTORIAL

- Filter >Render >**Clouds**
 - Convert to Smart Object (Edit Filters)
- Liquify Filter
- Selection & Masking
- Overlays
- Bevel Emboss

LIQUIFY- SELECT SHOW BACKGROUND

CREATING HONEY

Images Used

CREATING HONEY

First Attempt

- Using own image vs. stock images
- Not enough translucence to blend with honey
- Utilized Gradient Maps referencing golden tones from honey
 - Levels to match
 - Colour balance to match
- Colour matching not effective enough
- Warping and smoothing form to manipulate did not work as planned

CREATING HONEY

Combing Images

- More fluid graphics > Water images > Gradient Overlays > Levels > Colour Balance > Masking
- Water images and bread skewed to fit accurate perspective

CREATING HONEY

Liquify

- Pull > Bulge > Pinch to create desired effects and ripples
- Continued a number of times to create effects
- Avoided face to create distracting distortions

CREATING HONEY

Shadows and Highlights

- Dodge and burn to create shadows and highlights
- Coloured brushes on low opacity to create more natural shadows and depth

CREATING HONEY

Before and After Images
